WINTER SEMESTER

Student Name: GAURAVI AHUJA

REG NO.: 25BAS10018

Branch: Aerospace Engineering

Year: 1st Year

Course: Digital Literacy

Course Code: CSE0001

Faculty Name: Dr. Kannan

Submission Date: 31-03-2026

INTRODUCTION:

This project helped me understand why knowledge of digital literacy is important for students today. As a Student Digital Ambassador, my goal was to create a digital portfolio which shows that we can use online tools safely and responsibly.

Through the five tasks, I made:

- Infographic
- Professional profiles
- Used coding and collaboration platforms
- Wrote professional emails
- Learn about cyber crime

Each task taught me practical skills that students use to complete their day-to-day tasks, like using Google tools, practicing coding, staying safe online, and communicating properly. This project also helped me start building a strong and professional online presence that will be useful for my studies and future career.

TASK-1: Create a Digital Literacy Awareness Infographic

To create my infographic, I used CANVA, which is a free online design tool that is pretty intuitive and easy to work with, especially for someone who isn't a professional designer.

My infographic is based on Digital Literacy, which is designed in a vertical poster with a violet background and glowing text which give it a techy, modern feel.

The poster gives information on mainly five topics:

- what is digital literacy?
- Useful digital tools
- Safe internet practices
- Professional online Presence
- Email Etiquette

Creating this infographic taught me how to present information in a simple and visual way instead of long text. It also helped me understand why digital literacy is important in our daily lives and reminded me to always stay safe and responsible while using the internet.

TASK-2: Build Your Student Digital Portfolio

I created my Student Digital Portfolio by setting up my profiles on three platforms: LinkedIn, GitHub, and ResearchGate. These platforms will help me grow academically and professionally throughout my B.Tech journey. Each platform has a different purpose, and together they help build a strong online presence.

LinkedIn: I updated my profile with my education details and course information. This platform will help me connect with classmates, seniors, teachers, and professionals. It will also be useful in the future when I look for internships or job opportunities.

GitHub: I created my profile README and organized my repositories. GitHub is important because it lets me upload my coding projects, assignments, and future technical work. It shows my skills and progress as I learn more about programming and technology.

ResearchGate: I set up an academic profile where I can explore research papers and follow scientific work. In the future, I can upload my own research or projects and connect with people in my field.

Overall, creating my digital portfolio helped me understand how important it is to build a professional identity online. I plan to update these profiles regularly with new achievements, projects, and learning experiences.

TASK-3: Explore Coding & Collaboration Platforms

I explored two useful platforms that helped me improve my coding skills and learn about online collaboration tools. This task gave me hands-on experience and showed how digital tools can support my studies.

For Part A-Coding Practice

I created an account on HackerRank and solved a beginner-level coding challenge. This helped me understand how coding problems are given and how the platform checks your answers instantly. Solving the problem improved my confidence and taught me how basic programming and logical thinking work together. It was a simple but helpful introduction to coding practice.

For Part B-Google Workspace Collaboration,

I created a Google Form called Digital Literacy Awareness Quiz. The form had five questions, including multiple-choice and short-answer types. While working on this, I learned how to design questions, collect responses, and check the answers through Google Sheets. It showed me how easy it is to create surveys or quizzes using Google Workspace tools.

This task helped me understand how coding platforms like HackerRank build problem-solving skills, while tools like Google Forms make collaboration and information sharing simple. These platforms will be very useful for future assignments, group projects, and academic activities.

TASK-4: Draft a Professional Email & Etiquette Guide

I Learned how to write proper and professional emails, which is an important skill for student. I created two emails for this task.

The first email was to professor, where I requested an extension for an assignment.

The second email was written to an internship coordinator to show my interest in a summer internship opportunity.

While writing these emails, I understood how important it is to use a clear subject line, polite words, and a proper structure. Professional emails need to be short, respectful, and easy to understand. This task helped me learn how to express my message politely and confidently.

I also made a Social Media Do’s and Don’ts checklist with five points in each category. This helped me understand how to behave responsibly on social media. I learned that we should protect our privacy, avoid sharing personal information, think before posting, and stay respectful online. These simple rules can prevent misunderstandings and help maintain a positive digital presence.

Overall, Task 4 helped me improve my communication skills and made me more aware of how to behave safely and responsibly on digital platforms.

TASK-5: Cybercrime Awareness Case Study & Prevention Guide

Phishing is a cybercrime in which attackers impersonate trusted entities to trick users into revealing sensitive information. phishing attack is a well-known example, where users received fake document-sharing emails that appeared legitimate. When they clicked the link and granted permissions, attackers gained access to their Gmail accounts and contacts. The attack spread rapidly, affecting nearly one million users within hours. This case highlights the importance of user awareness, as phishing mainly exploits human trust rather than technical weaknesses.

I also created a prevention checklist to explain how students can stay safe online. Some important points include avoiding unknown links, not downloading files from untrusted websites, keeping devices updated, using antivirus software, checking UPI IDs carefully, and enabling two-factor authentication. These simple habits can prevent many cyberattacks.

By completing this task, I understood how important cybersecurity awareness is in daily life. It made me more careful about the emails I open, the links I click, and how I protect my laptop and personal information. This task reminded me that staying alert online is the best way to avoid cybercrime.

CONCLUSION:

This Digital Literacy project helped me understand many useful digital skills that I will need in my academic and professional life. Each task taught me something practical, like creating infographics, setting up professional profiles, practising coding, using collaboration tools, writing proper emails, and learning about online safety. These activities increased my confidence in using digital platforms in a safe and responsible way. The project also helped me build a strong digital presence that I can keep improving throughout my course. Overall, this project made me more aware, more confident, and better prepared for the digital world.
